

SUBHAM DAS

Software Developer

SUMMARY

Software Developer with 4.5 years experience in backend (Spring Boot) development. Expertise in building responsive web interfaces, creating RESTful APIs, Java 8, JavaScript, and Databases like PostgreSQL and optimizing application performance. Proficient in Data structure and algorithms and writing clear, concise code that is easy to maintain and troubleshoot.

EXPERIENCES

Consultant

April 2025 - Present

KPMG INDIA | Bengaluru

- Migrated GSAM Payment Service: Refactored a core payment module from Dagger to Spring Boot, improving maintainability and scalability of the service.
- Enhanced ES Queue Integration: Worked on an internal messaging system (similar to Kafka/JMS) to process payment requests. Enhanced the queue handling logic to support multiple payment services and added mechanisms to trace the origin of requests for better system observability.
- Developed DARTS-Bridge API: Designed and implemented an API to push data into EMS Queue (integrated with GPS team's systems). Built a separate method to consume queue responses and redirect data dynamically to appropriate URLs.
- Resolved SSI Billing Bug: Fixed a critical issue in the bulk upload process, ensuring that the correct producer system (e.g., Billing) is captured dynamically from incoming requests instead of relying on hardcoded values, thereby improving automation and data accuracy.

System Engineer

August 2021 - May 2025

Tata Consultancy Services | Kolkata

- Simplified web application, leveraging HTML & CSS knowledge to streamline the build process, resulting in a 25% faster deployment timeline and enhanced user experience
- Teamed with backed developers and contributed in Git version control (GIT) and software development in agile Methodologies with maintaining a CI/CD pipeline using Jenkins and GitLab CI for automated testing and deployment, reducing manual intervention by 30%

PERSONAL PROJECT

AWM - Payment Service (PAAS)

- Our Payment Request goes through AWS-managed components — using API Gateway, Lambda, Step Functions, S3, and DynamoDB — to execute an payment processing with validation, enrichment, approval, and message generation.
- It's a serverless architecture designed for scalability and low maintenance.

APPCON Project - Interactive Platform for Banking Services Interface Design

- Developed a platform called APPCON for CITI Bank, where the monitoring team can add banking services, add layers on which banking application is running. Also this platform will show metrics of each service, how much memory is being consumed by the server or inward / outward data Implemented

SKILLS

Back-End Development

- Java
- Spring
- Spring Boot
- JDBC
- Spring MVC
- RESTful APIs
- Spring JDBC
- Kafka
- Spring JPA / Hibernate
- Microservice

Database

- MySQL
- MongoDB
- PostgreSQL
- SQL

Tools & Technologies

- Git
- Figma
- Postman
- Bitbucket
- MavenGit
- Mockaroo
- GitHub
- Maven
- AWS
- Design Pattern

ACHIEVEMENTS

- Certified AWS Fundamental
- LeetCode - 350+ Problem solved
- HackerRank Problem Solving Certified (Basic + Intermediate)
- CodeChef - 3 star in Problem Solving
- Achieved the special Initiative Award
- Recognized for outstanding contribution towards the ongoing project at TCS (2023)

EDUCATION

B.Tech in Computer Science and Engineering

ACADEMY OF TECHNOLOGY

July 2017 - June 2021

CGPA : 8.5
